SePP : Smart Educational & Productive Portal

BY STORMING CIRCUITS

TEAM ID : C1787JR1

CATEGORY : JUNIORS

PM SHRI KV AFS SULUR

KVS CHENNAI RO

Agenda

- Understanding of the problem
- Breakdown of Logic & Algorithm
- Code Implementation
- Demonstration of Output
- Challenges faced and solutions

✨ Features

★ Understanding of the Problem

- The project aims to create a platform where students can manage time, practice quizzes, track progress, and improve productivity using smart digital tools.
- It should provide an easy-to-use system where users can log in, attempt quizzes, view dashboards, check stats, and manage learning activities smoothly through the website.
- A working web application that helps students learn better by showing personalized progress, offering interactive features, and simplifying their overall study experience.
- Today, students need quick feedback, accessible learning tools, and clear progress tracking. A system like this supports smarter learning, helps to manage time, and improves academic performance as well as health factors using digital technology.

★ Breakdown of Logic & Algorithm

- **Overall Approach / Working Principle:**

- The system takes user input (login or quiz attempt), processes it through predefined rules, updates data (score, progress, or profile), and displays the result on the dashboard in real time.

- **Pseudocode**

```
BEGIN
IF user_not_registered THEN SIGNUP
ELSE LOGIN
LOAD dashboard
CHOOSE feature (quiz/stats/friends)
IF quiz_selected:
load_questions()
get_user_answers()
score = evaluate()
update_progress(score)
show_results()
ENDIF
END
```

★ Breakdown of Logic & Algorithm

- **Step-by-Step Algorithm**

- 1.Start
- 2.User signs up or logs in
- 3.Load user profile & dashboard
- 4.User selects a quiz or feature
- 5.System fetches required data
- 6.User submits answers/input
- 7.System validates responses
- 8.Calculate score/progress
- 9.Update database or local storage
- 10.Display results & analytics
- 11.End

★ Code Implementation

Firestore Config

```
const firebaseConfig = {  
  apiKey: "AIzaSyB2H7d8KibkE9M91bDuRip-GohbgtQeYmY",  
  authDomain: "c1787jr1-zonals.firebaseio.com",  
  projectId: "c1787jr1-zonals",  
  storageBucket: "c1787jr1-zonals.firebaseio.com",  
  messagingSenderId: "1060126001634",  
  appId: "1:1060126001634:web:27287bf23e00797a03d1bb",  
  measurementId: "G-REXP83QPSC"  
};
```

★ Code Implementation

User Login Validation

```
function login() {  
    const email = document.getElementById("email").value;  
    const pass = document.getElementById("password").value;  
  
    if (email == storedEmail && pass == storedPass) {  
        window.location.href = "dashboard.html";  
    } else {  
        alert("Invalid Credentials");  
    }  
}
```

Challenges Faced

1. We initially faced the issues connecting the database with the friends network development.
2. API Keys billing
3. We had troubles while connecting the Gemini API with the Firebase Database.
4. We had issues initially with the responsiveness of the website.

Technology
Innovation Hub
of IIT Delhi

Solution for the Challenges

1. Friends Network Issue : We changed a set of rules in the firebase database to fix it.
2. To overcome the API Billing, we researched and selected Gemini API since it aligned with the topic
3. Firebase to Gemini API : We accomplished it by import command
4. Responsiveness: We later worked on the @media queries for it

SePP - School Educational & Productivity Platform is a Modern solution for our modern problems. SePP helps students create and maintain personalized planners.

It improves learning efficiency, offers instant personalized report & routine generation, encourages consistent practice, and helps students stay organized through data-driven insights.

Scope for Future Improvements

- Adding AI-based personalised recommendations
- Integration with cloud databases for real-time syncing
- Gamification elements (badges, levels, leaderboards)
- Voice-enabled learning or chatbot guidance
- More advanced analytics and peer comparison tools
